

Customer: Department of Health & Human Services

Location: Washington D.C.

Job Function: Tivoli Framework Enterprise Management System

Contract Value: \$7,534,630

Contract Period: December 1999 – December 2002

Overview:

Department of Health & Human Services (HHS) plans to leverage Internet Technology in 2000 to deliver more information to the public and to improve communications among its operating divisions and headquarters, thus keeping with the Health Insurance Portability and Accountability Act of 1996 and a presidential directive on cyber security issued by President Clinton in 1998.

In order to achieve its department objective HHS, Deputy chief information officer, Brian Burns found it necessary to have a IT Management system. The Management system will provide HHS a centralized IT management process, which will reshape how HHS buys, manages and secures its IT system.

SMF provides the solution to HHS need to have a centralized system that provides security and uniformity to its 13 divisions which operate under UNIX,NT, and Novell platforms. SMF implements a Tivoli Management program called SecureWay®, which is an integrated family of security products that provide a comprehensive and scalable solution for centralized security management and access control which will benefit HHS in the following manner..

- Enables HHS to quickly deploy secure e-business applications
- Allowing consistent enforcement of security and privacy policies
- Providing centralized enterprise risk management
- Simplifying security administration

Tivoli SecureWay provides a single interface for maintaining security profiles and policies across heterogeneous systems in mainframe, distributed and desktop environments.

This allows HHS to decrease their costs while increasing productivity and customer satisfaction.

Currently SMF installed and maintains the Tivoli SecureWay® system to 30,000 seats which may increase to 65,000
